Need a more efficient way to store and access your important organizational information? Enable automation and tracking of business processes using the simple, searchable Enterprise Content Management (ECM) system, PaperVision Enterprise.

**EFFICIENCY NOW**

- Store information on-premise and speed up document retrieval times.
- Locate documents in seconds with keyword searches to improve organizational functions.
- Automate document processing, including collecting information directly from email and electronic forms.

**CONTROL NOW**

- Protect information when stored and transmitted using multiple levels of security, user controls, and encryption.
- Gain regulatory confidence with evidence of audit trails, security controls, user activity, document history, and records retention.
- Simplify your disaster recovery strategy with automated backups and multiple copies of information.

**MONEY NOW**

- Reduce your cost per document processed by managing files digitally.
- Re-purpose document storage space for money-making activities.
- Streamline organizational decision-making for faster results.

“PaperVision Enterprise is fantastic! Now when a student shows up for enrollment, we don’t have to delay their enrollment and tell them to come back in a week when we finally find their records. The system is saving us more than $1 million dollars every year!”

- Fernando Marino
  Director of Business Solutions
What Problems Can PaperVision Enterprise Solve?

As the pace of business continues to increase, workers need fast, secure access to information in order to make critical decisions and generate results. Individual files stored on desktops and corporate networks do not offer the simple, searchable access you need. PaperVision Enterprise facilitates your success by speeding information access while maintaining strict security standards.

Intelligently Locate Information
You need access to information in order to make critical organizational decisions. Powerful search capabilities allow you to locate any information in seconds, saving countless hours of productivity. One search returns all related information in virtually any format including scanned images, Microsoft® Office and other electronic files, emails, PDFs, and more. Find anything you need, the moment you need it.

Grow as Needed
Your organization needs information storage that automatically grows as you do. Run PaperVision Enterprise on a single desktop computer or thousands of computers across a globally distributed network, which can be leveraged, tiered and load-balanced to fit your specific needs.

Protect Sensitive Data
Protect information from prying eyes! Multiple layers of security, including transmission, system, data, user, project, and application settings, provide access to only those who need it. Ensure compliance with a wide variety of regulations, and meet all reporting and auditing standards to prove security. Encryption further protects data both during transmission and while being stored.

Integrate Seamlessly
Upload files in hundreds of formats from most applications directly into PaperVision Enterprise for secure storage. Point-and-click integration makes it easy for you to share information with other line-of-business applications, so your workers have streamlined access to the data they need to continue work processes and generate results.

Collaborate Effectively
You need to share information and work on documents in collaboration with coworkers. Check-in/check-out and version controls ensure you’ve always got the most current version and you’ll never overwrite each other’s work. With PaperVision Enterprise, you’ll collaborate with confidence.

Minimize Downtime
Does the threat of a disaster keep you up at night? PaperVision Enterprise offers the peace of mind that comes from knowing your most critical information is securely protected from both cybercriminals and physical disasters. You can even package data into an encrypted file and transfer it off-site, using PaperVision® Data Transfer Manager, allowing you to recover from any disaster.

Suite Options
- Cloud ECM – ImageSilo®
- Award-winning enterprise capture – PaperVision® Capture
- Patented forms processing – PaperVision® Forms Magic Technology
- Print stream processing – PaperVision® Enterprise Report Management
- Professional Services are available to help you design and implement your entire ECM system.

**SYSTEM OVERVIEW**

Users can search, upload, scan, or view the folders of any project, access E-Forms, and destruction lists, see worksteps waiting, and view recent or favorite items directly from the home screen.

Browser-based document viewer enables secure access to view or share documents on virtually any device without requiring application installation.

Optional PaperVision Assistant for Microsoft Windows can scan, print, email, save, navigate and view documents, view thumbnails, index documents, and allow users to perform tasks within workflows.

The PaperVision Client for Microsoft Windows provides the optimal user experience by offering the functionality found in the web interface and the PaperVision Assistant in a desktop application.

Store and retrieve any file type, including images, Microsoft Office files, and PDF’s.

Up to 200 unique index fields can be defined for each document.

Extensive full-text search capabilities support stemming, phonetic, fuzzy, synonym, Boolean, natural language, and variable term weighting search options.

Search results screen displays duplicate documents as a single item or as an expandable list, showing all duplicates on the same screen.

Versioning and check-in/check-out functions include detailed audit tracking and simplified roll-back processes.

Extensive reporting capabilities provide detailed audits trails and track user productivity and utilization, including workflow status and history, records retention, and destruction activities.

Annotations allow specific users to hide information within a document, or to add textual notes.

Integrated PaperVision® Message Manager imports, captures, and organizes email messages and ensures necessary messages are retained and unwanted messages are filtered out based on administrator-defined criteria.

Administrators can create, manage, print, email, and export e-forms as PDFs.

Administrators can require an electronic signature for any document.

Document associations link related documents across multiple projects and allow users to easily locate them from a single document.

Share Document allows external users limited access to specific documents via a secure link.

**Technical Specifications**

Scan2PVE allows users to scan and upload documents, move or delete pages within a document as well as maintain version control.

PaperVision Automation Service automates the importing of documents, backup processing, maintenance queue items, and migration jobs.

Annual maintenance includes access to all product updates, ensuring access to the latest product features and benefits.

Complete, detailed online help and electronic product manuals are included to get you started quickly.

Toll-free, legendary technical support is eager to assist with any questions you may have.

**SECURITY**

AES 256-bit encryption occurs during import and when data is stored and transmitted.

Session ID encryption ensures that a session cannot be hijacked.

Function-level verification is performed for every API call made to PaperVision Enterprise, whether from the application or through the API.

Session source persistence and IP address limiting guarantees users can access the system only from authorized locations.

Support for Secure Sockets Layer (SSL), Transport Layer Security (TLS), and non-standard ports ensures data and email transmission security.

Automatic session termination ends a user’s session when it sits idle for a defined period of time.

Data segregation separates database and document data to ensure one company or department cannot access another’s data.

Security policy administration tools include account lockouts, password complexity requirements, and expiration.

Entity-level security defines company-wide security settings and performs non-repudiation checks on all documents and emails.

Entity-level security policies simplify password changes and allow users to reset forgotten passwords.

Group-level security assigns a common set of access rights to all users within a group.

User-level security defines individual user permissions.

Project-level security assigns functionality-based security at the project level.

Document-level security sets specific security settings for individual documents as soon as they enter the system.
**Technical Specifications**

Function-level verification controls user rights, such as printing, emailing, exporting, and deleting.

Index-level security controls user ability to view and/or edit document index fields.

Retention policies can be configured to protect records from destruction during specified time periods, to set up email review notifications, and to automatically purge expired records.

**SCALABILITY AND RELIABILITY**

PaperVision Administration Console provides centralized global administration access.

Support for multiple database servers accommodates growing storage needs.

System supports an unlimited number of companies and projects.

Full support for hardware load-balancing and Windows® Network Load Balancing provides additional reliability and scalability.

Backup processing enables organizations to package a duplicate copy of data into a single, encrypted, compressed file for data replication.

PaperVision® Data Transfer Manager sends packaged backup files (via FTP/FTPS) to a separate site for disaster protection.

**INTEGRATION**

System includes full support for Microsoft® SQL Server®.

Extensive use of web services supports integration and cross-platform compatibility.

.NET-based APIs support both local and remote communications without requiring modification to code.

Administrators can configure additional API integration tools to automate administrative functions.

.NET Integrator enables point-and-click integration with third-party applications.

Black and white, as well as color print drivers, print directly to PaperVision Enterprise from most applications.

PaperVision® Enterprise Tools provide out-of-the-box integration with Microsoft Office applications, including Word®, Excel®, PowerPoint®, Outlook®, and Windows Explorer.

Optional PaperVision Enterprise Workflow automates the flow of information through routine business processes.

PaperVision Enterprise Workflow and Scan2PVE work together to allow users to capture documents and upload them into a new or existing workflow process.

PaperVision Message Manager captures emails from virtually any system including Microsoft® Exchange Server, Outlook .pst files, POP3, and IMAP-compliant systems.

**SYSTEM REQUIREMENTS**

Windows Server® 2008 R2, 2012, 2012 R2, or 2016 (servers)

Microsoft® Windows® 7, 8, 8.1, or 10 is required for:

- PaperVision Administration Console
- PaperVision Assistant
- PaperVision Automation Service

PaperVision Web/Application or Authentication Gateway Server require Internet Information Server (IIS) 7.5 or later.

Microsoft®.NET Framework version 4.7 or higher.

Microsoft® Windows Installer version 4.5 or higher.

Windows® PowerShell version 1.0 or later.

Microsoft SQL Server 2008, Server Express 2008 R2 or later.

PaperVision Viewer and Browser-Based viewer work with Internet Explorer® 11 and the latest versions of Firefox® and Chrome™.

Browser-based viewer works with the latest version of Safari®.

4 GB RAM (desktops), 8 GB RAM (servers)

Approximately 1.05 GB of hard disk space.

Additional storage space for stored data.

SVGA monitor 1024 x 768 or higher recommended.
